# COMPANY

# INTRODUCTION

About Willog

# Willog fosters trust through customer communication

Logistics is evolving; digital transformation is essential for corporate success.

Willog offers logistics condition monitoring solutions with proprietary devices and software. By ensuring cargo and assets maintain optimal condition, Willog enhances supply chain management, saving time and costs.

Customers benefit from maintaining product quality and stability, preventing issues during transportation, through Willog's tailored solutions.

# Offering visibility to products in transit blind spots

# Delivering consulting to after-sales management with expertise

**Step 1**  
Evaluation

**Step 2**  
Service implementation and design

**Step 3**  
Testing and Improvement

**Step 4**  
Introduction and implementation

**Step 5**  
Operation and after-sales management

# 42 patents and IP rights secured, along with international standard certifications attained

All Willog sensor devices hold domestic and international technical certifications, including ilac MRA(Validation/Calibration).

# Willog moves towards the global market

Willog aims to globalize logistics transparency through its capabilities and network.

Best alternative for in-transit quality management

# Logistics Condition Monitoring Solutions

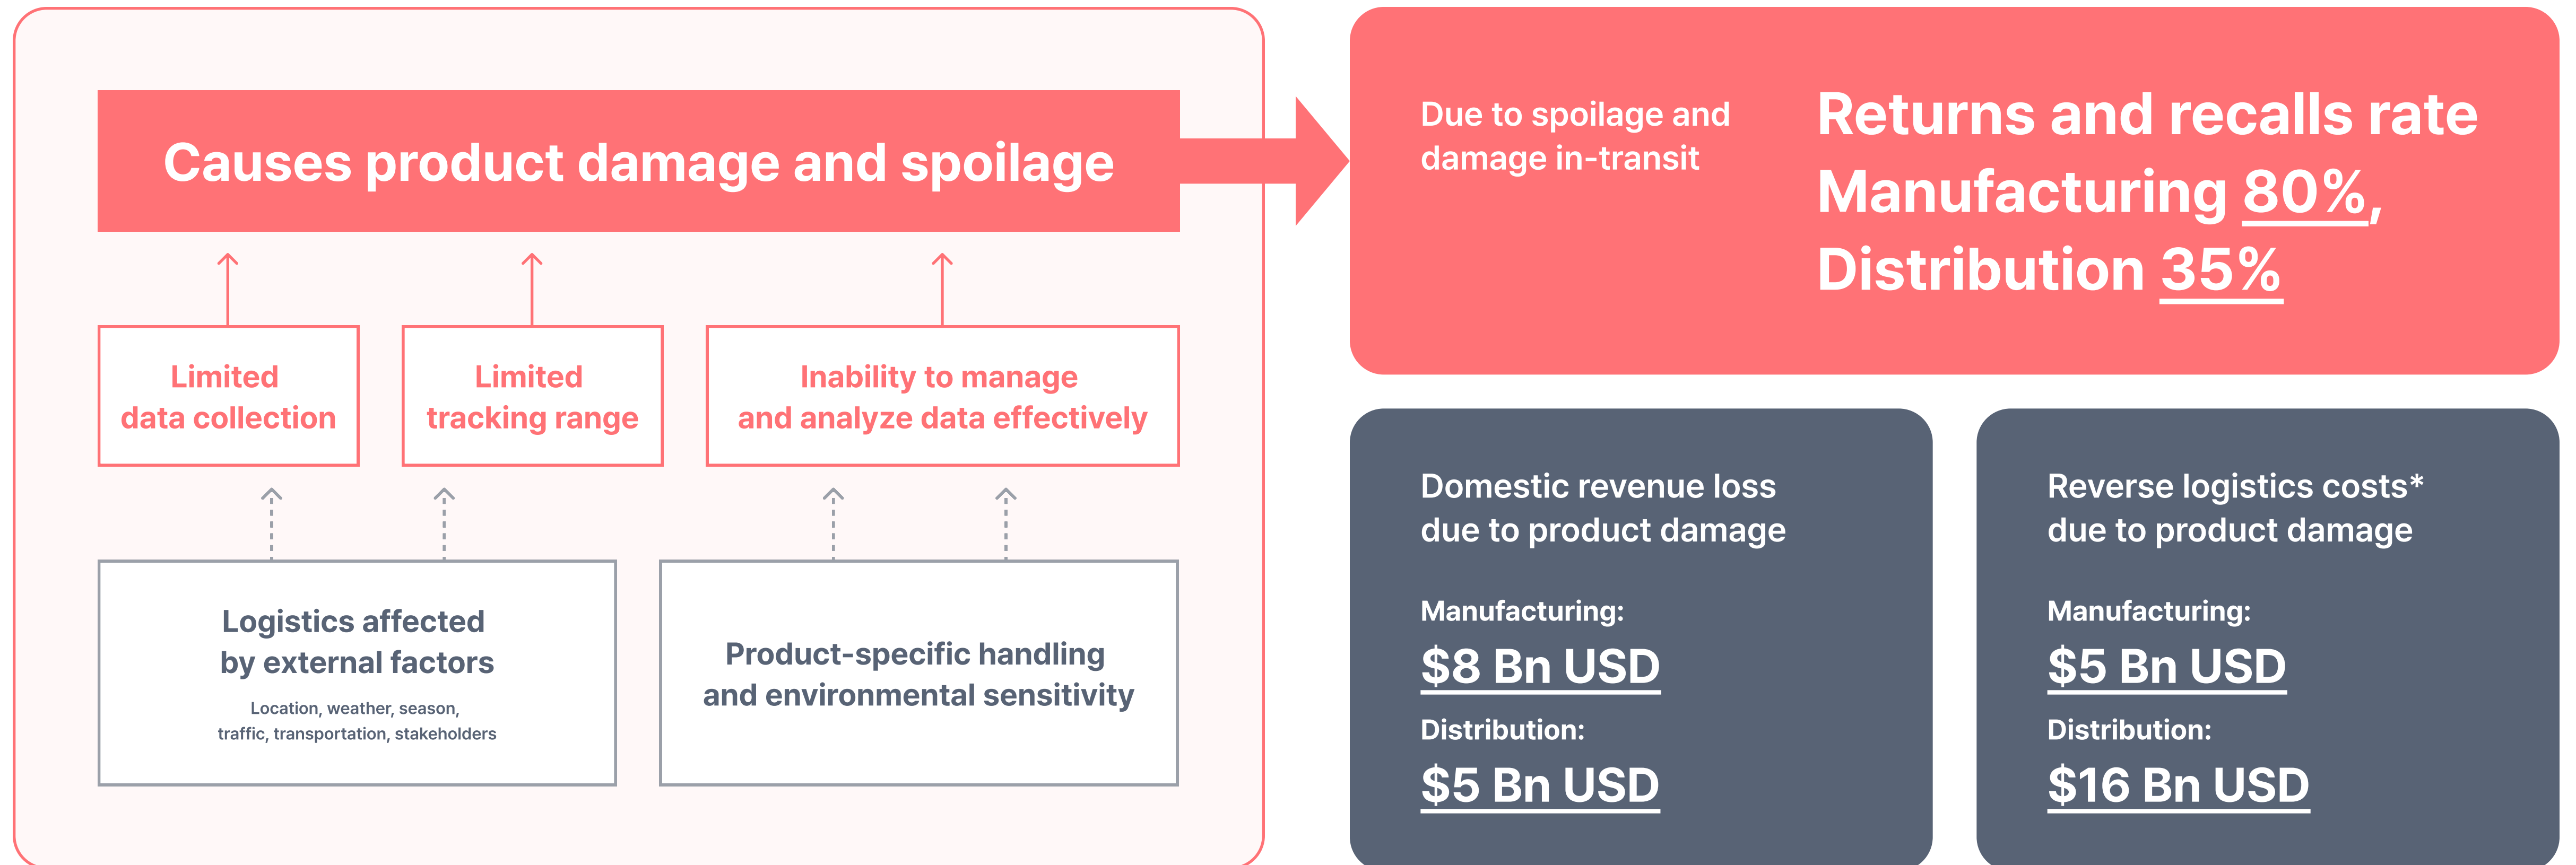

- Willog Devices
- Willog Dashboard

# Pain Points of Logistics

Source: Statistics Korea, 2020 Business Logistics Cost Survey

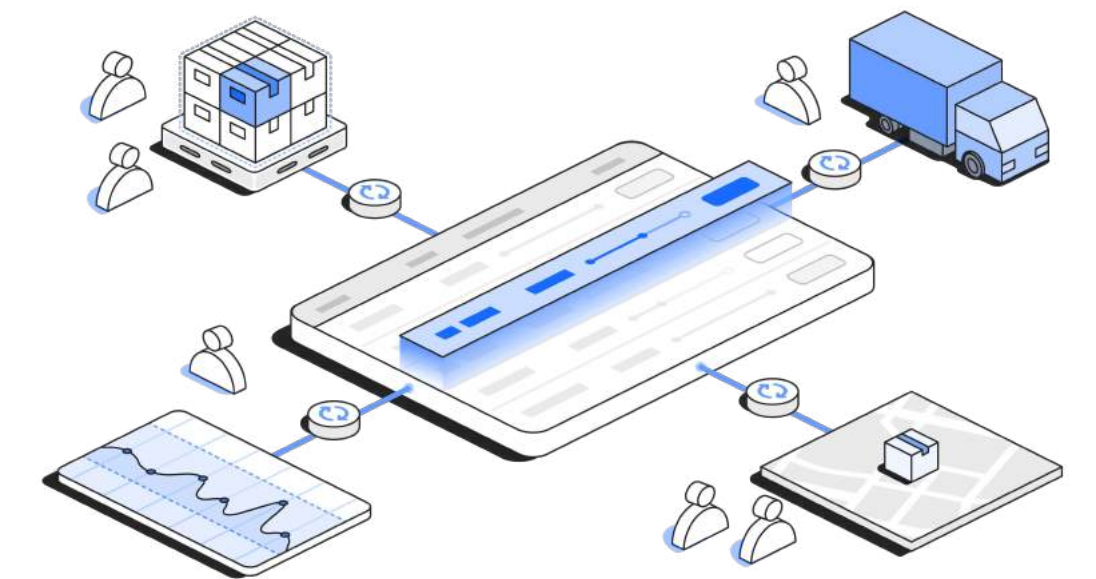

\* Reverse logistics costs: Logistics (transportation) costs incurred for retrieving items from the destination for returns and disposal.

# Logistics Condition Monitoring Solutions

Our devices collect logistics data for visibility and swift issue response via alerts, enabling data-driven quality management during transit.

## Applicable to various fields requiring product quality management

Our solutions serve pharmaceuticals, logistics, food/agriculture, sensitive cargo, and maritime transport.

## Seamless product quality control in-transit

Pre-integrating sensors with product info, we collect temperature, humidity, and impact data aligned with product traits.

## Thorough risk management through data

Temperature alerts prompt swift response, while accumulated data aids clear cause analysis.

## Streamlined logistics processes

Stakeholders can intuitively view product status and location history via data for rational decision-making.

# Applicable fields

- Box/Bio Monitoring
- Warehouse Monitoring

## Applicable fields

Pharmaceutical and fresh food  
(manufacturers, wholesalers,  
distributors)

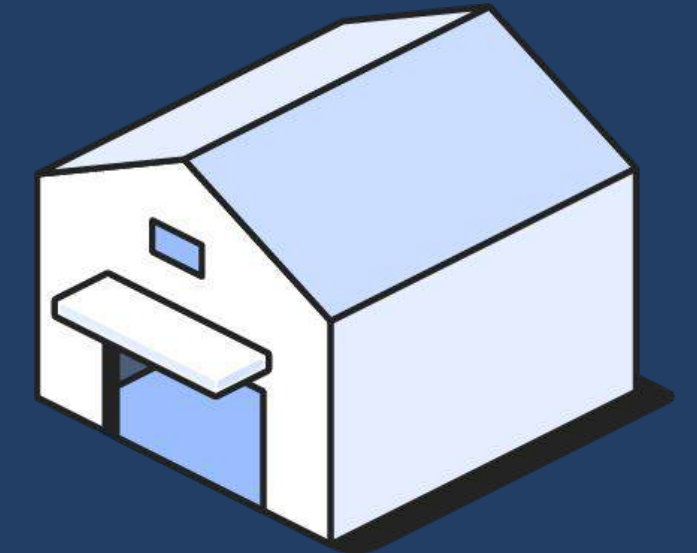

## Box/Bio Monitoring

- Managing location and temperature/humidity for pharmaceutical transport containers and reusable commerce boxes
- Manage product temperature records by invoice and order number
- Collect temperature data and send alerts for deviations during delivery

## Applicable fields

Temperature management for  
refrigerated and frozen warehouses and  
Facility validation (GMP, GSP, HACCP)

## Warehouse Monitoring

- Temperature management for cold chain manufacturers and facilities adhering to GMP, GSP, HACCP certifications
- Application for device data collection and settings adjustment
- View temperature/humidity measurements by location, manage via reports

# Applicable fields

- Export-Import Container Monitoring
- Vehicle Monitoring

## Applicable fields

High-value sensitive cargos, including semiconductor, display, and other electronics

## Export-Import Container Monitoring

- Manage location, temperature, and humidity for export/import from domestic land to international transportation
- Track vehicle location, route, and temperature via devices
- Retrieve temperature/humidity data and manage reports
- SMS alerts for temperature deviations and measured temperatures

## Applicable fields

Fresh food manufacturers, distributors, retailers, 2PL - 4PL

## Vehicle Monitoring

- Management of cargo vehicle location, temperature, and humidity for fresh food stakeholders, using owned or contracted vehicles
- Real-time tracking of vehicle location, routes, and temperature via app and devices
- Temperature data collected upon delivery or arrival, with SMS alerts for deviations

# Impact of logistics condition monitoring solutions

Monitoring product movement in the supply chain reduces uncertainty and establishes efficient transportation, maintaining company competitiveness.

## Pharmaceutical company A

- Responded to temperature deviations in 11.1% of shipments
- Prevented **\$18M** revenue loss
- Reduced costs, restored revenue competitiveness

## Food company C

- Identified **60%** of return causes
- Boosted customer satisfaction

## Manufacturing company D

- Shipped **\$10M+** monthly
- Averaged 10% deviation detected, prevented via real-time monitoring

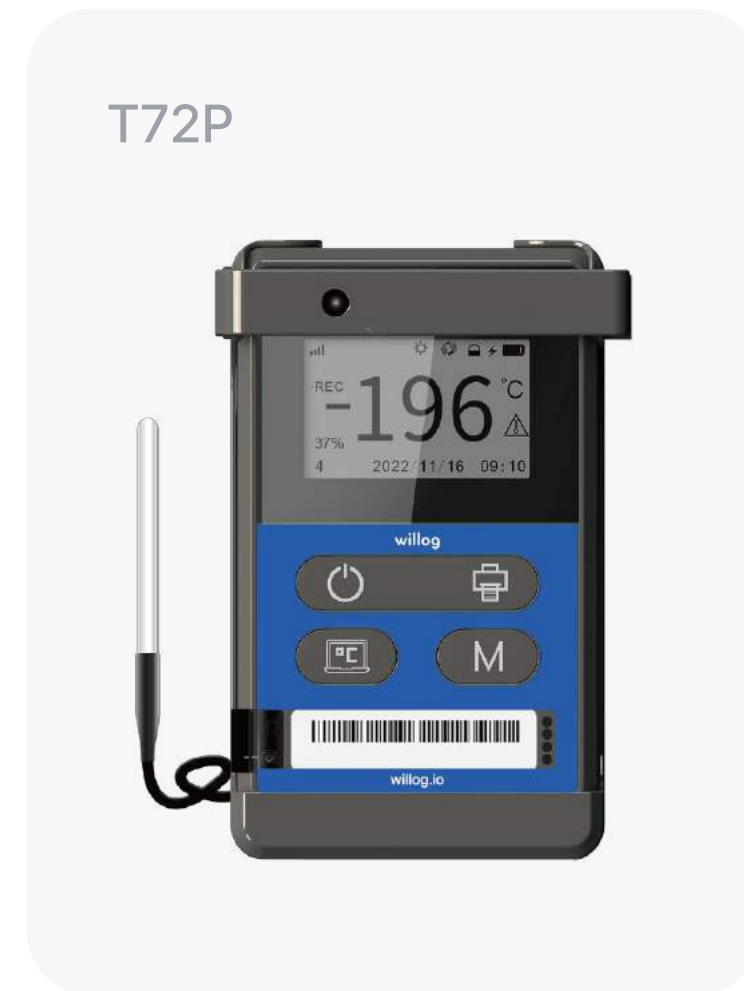

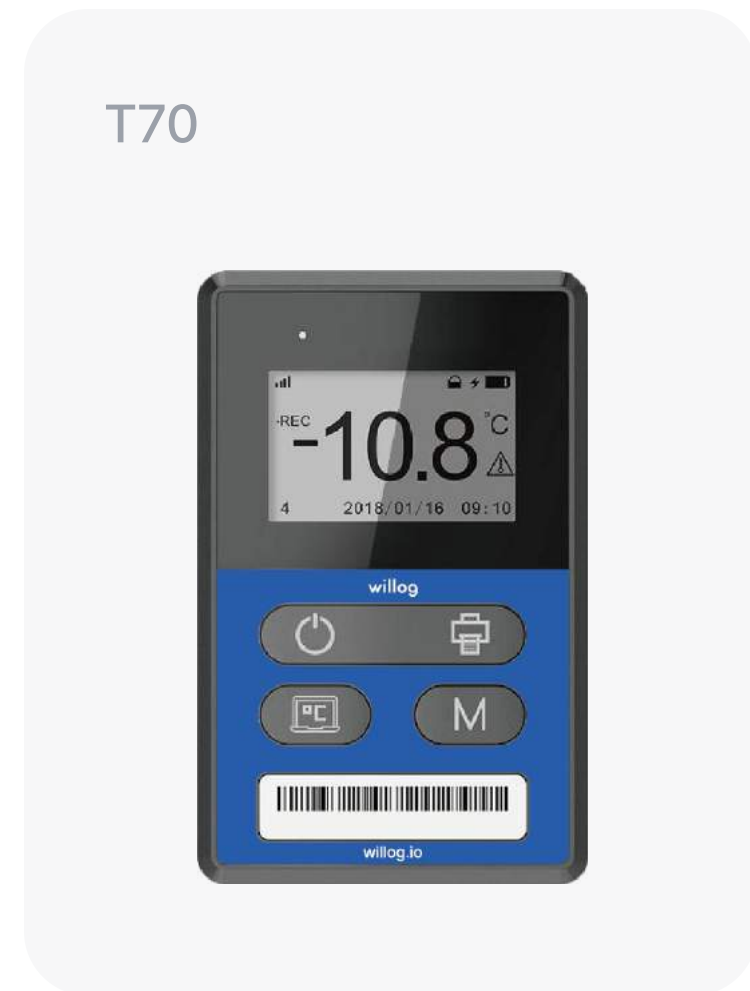

# Willog Devices

By pre-mapping Willog devices with product information, we seamlessly collect temperature, humidity, and impact histories in logistics environments like containers, warehouses, and vehicles. This minimizes human intervention and enhances reliability.

# Real-time Sensor Devices

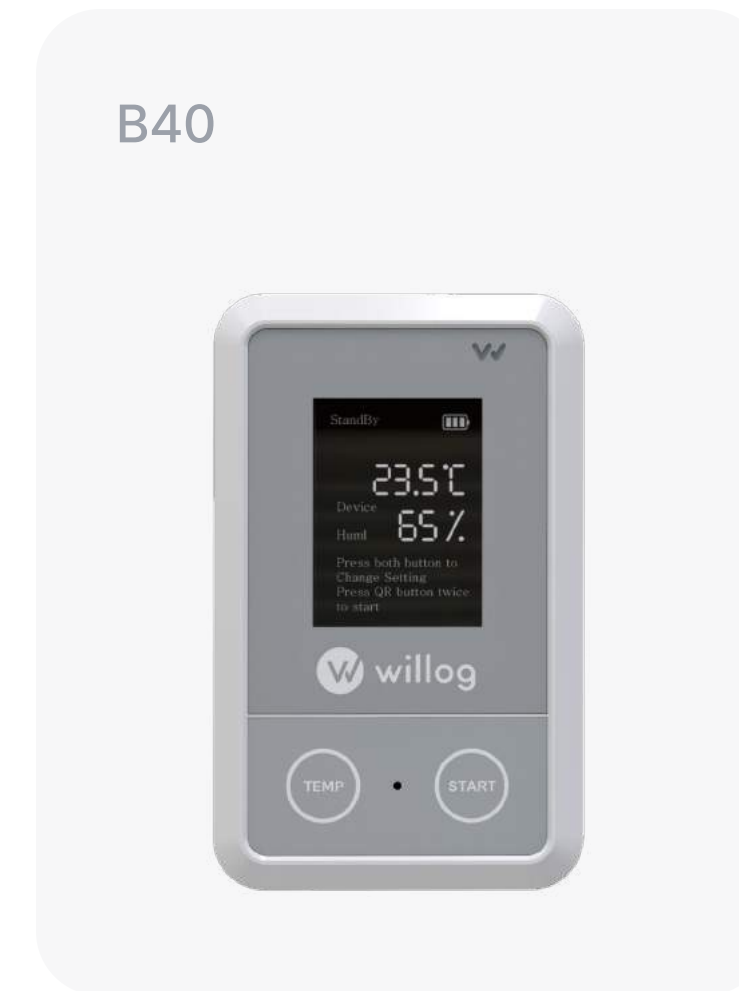

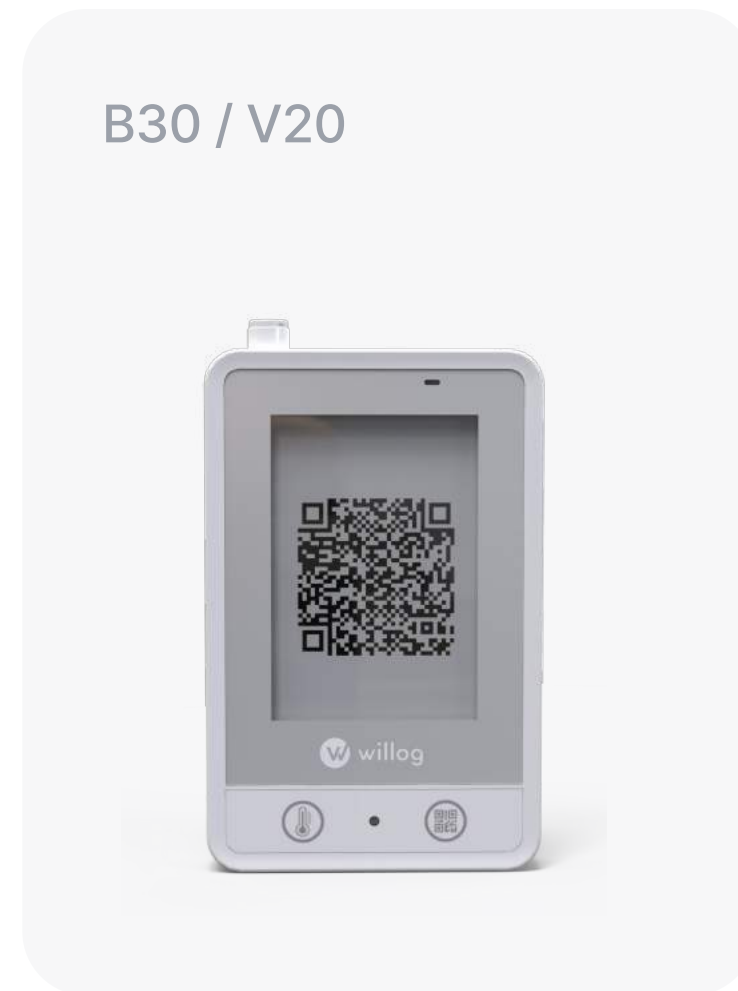

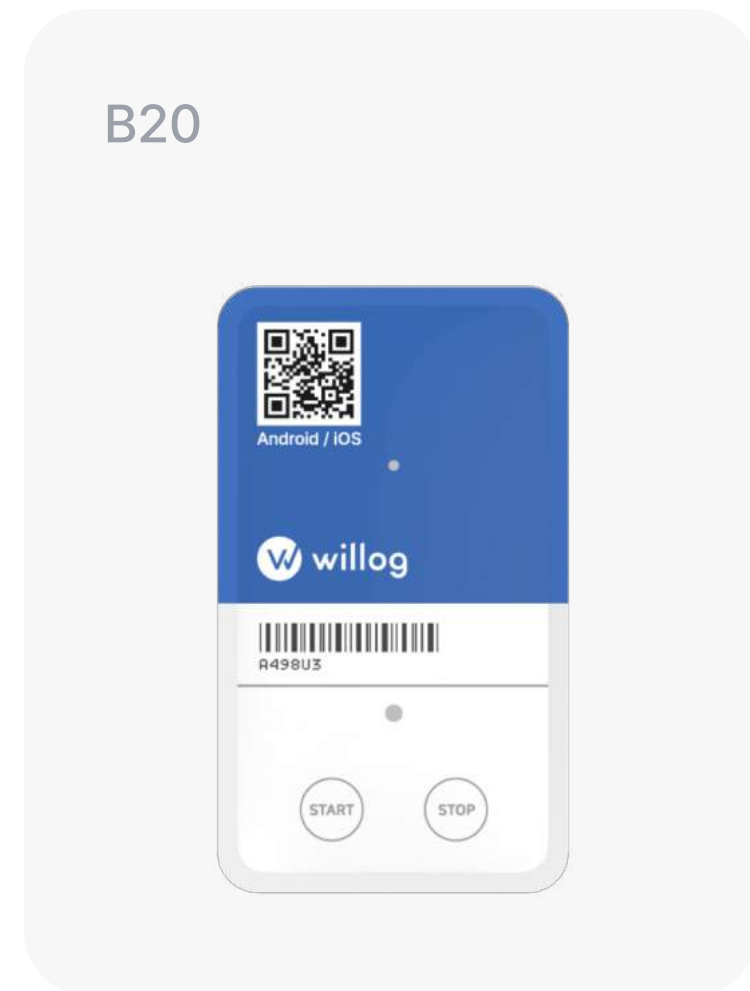

Model	Data Collected	Measurement Range (Temperature)	Measurement Range (Humidity)	Applicable Areas
T70	Temperature, Humidity, Location	-25 ~ +70°C	20~90%	Vehicle / Import and Export Monitoring
T71P	Temperature, Location	-40 ~ +80°C (Probe)	-	Box(Bio) / Import and Export Monitoring
T72P	Temperature, Location	-200 ~ +80°C (Probe)	-	Box(Bio) / Import and Export Monitoring
R30	Temperature, Humidity, GPS, Shock	-30 ~ +70°C	20~90%	Box(Bio) / Vehicle / Import and Export Monitoring
R30P	Temperature, GPS, Shock	-30 ~ +70°C(Probe)	-	Box(Bio) / Vehicle / Import and Export Monitoring

# Sensor Devices

Model	Data Collected	Measurement Range (Temperature)	Measurement Range (Humidity)	Applicable Areas
B20	Temperature	-40 ~ +80°C	-	Vehicle Monitoring
B30 / V20	Temperature, Humidity, Shock	-30 ~ +70°C	20~90%	Vehicle / Import and Export Monitoring
B30P / V20P	Temperature	-25 ~ +70°C(Probe)	-	Box(Bio) Monitoring
B40	Temperature, Humidity	-40 ~ +85°C	10~90%	Warehouse Monitoring
B40P	Temperature	-40 ~ +85°C(Probe)	-	Box(Bio) Monitoring

# Gateway

Model	Data Collected	Applicable Areas
GW-C20	Location, V20P Measurement Data	Box(Bio) / Warehouse Monitoring
GW-A20*	Location, B20 Measurement Data	Vehicle Monitoring

GW-C20

GW-A20 \* Connect to a tachometer to use as a vehicle temperature recorder.

# Willog Dashboard

The Willog dashboard allows you to monitor logistics temperature, humidity, impact, and location history. Quickly identify and respond to issues.

# Real-time integrated monitoring

- Track product information and transportation history by integrating with product databases or corporate systems.
- Monitor domestic and international transportation locations, temperature, and humidity.
- Receive real-time alerts for quick response to issues, minimizing losses.

The dashboard displays a table with the following columns: Type, Status, Delivery history, and PoD. The table contains four rows of data, each with a 'Can't issued' button in the PoD column.

Type	Status	Delivery history	PoD
...	All	No response	✕ Can't issued
		Shipped 22/07/18 08:53	Delivered 22/07/18 15:58
	Delayed	Shipped 22/07/18 09:12	Delivered 22/07/18 15:58
	MKT excursion	Shipped 22/07/18 11:34	Delivered 22/07/18 15:02
	Damaged	Shipped 22/07/18 07:21	Delivered 22/07/18 11:47

An alert modal is displayed in the foreground with the following content:

**Excursion occurred**  
**Start the return process.**

Scan remaining OTQ  
05046318

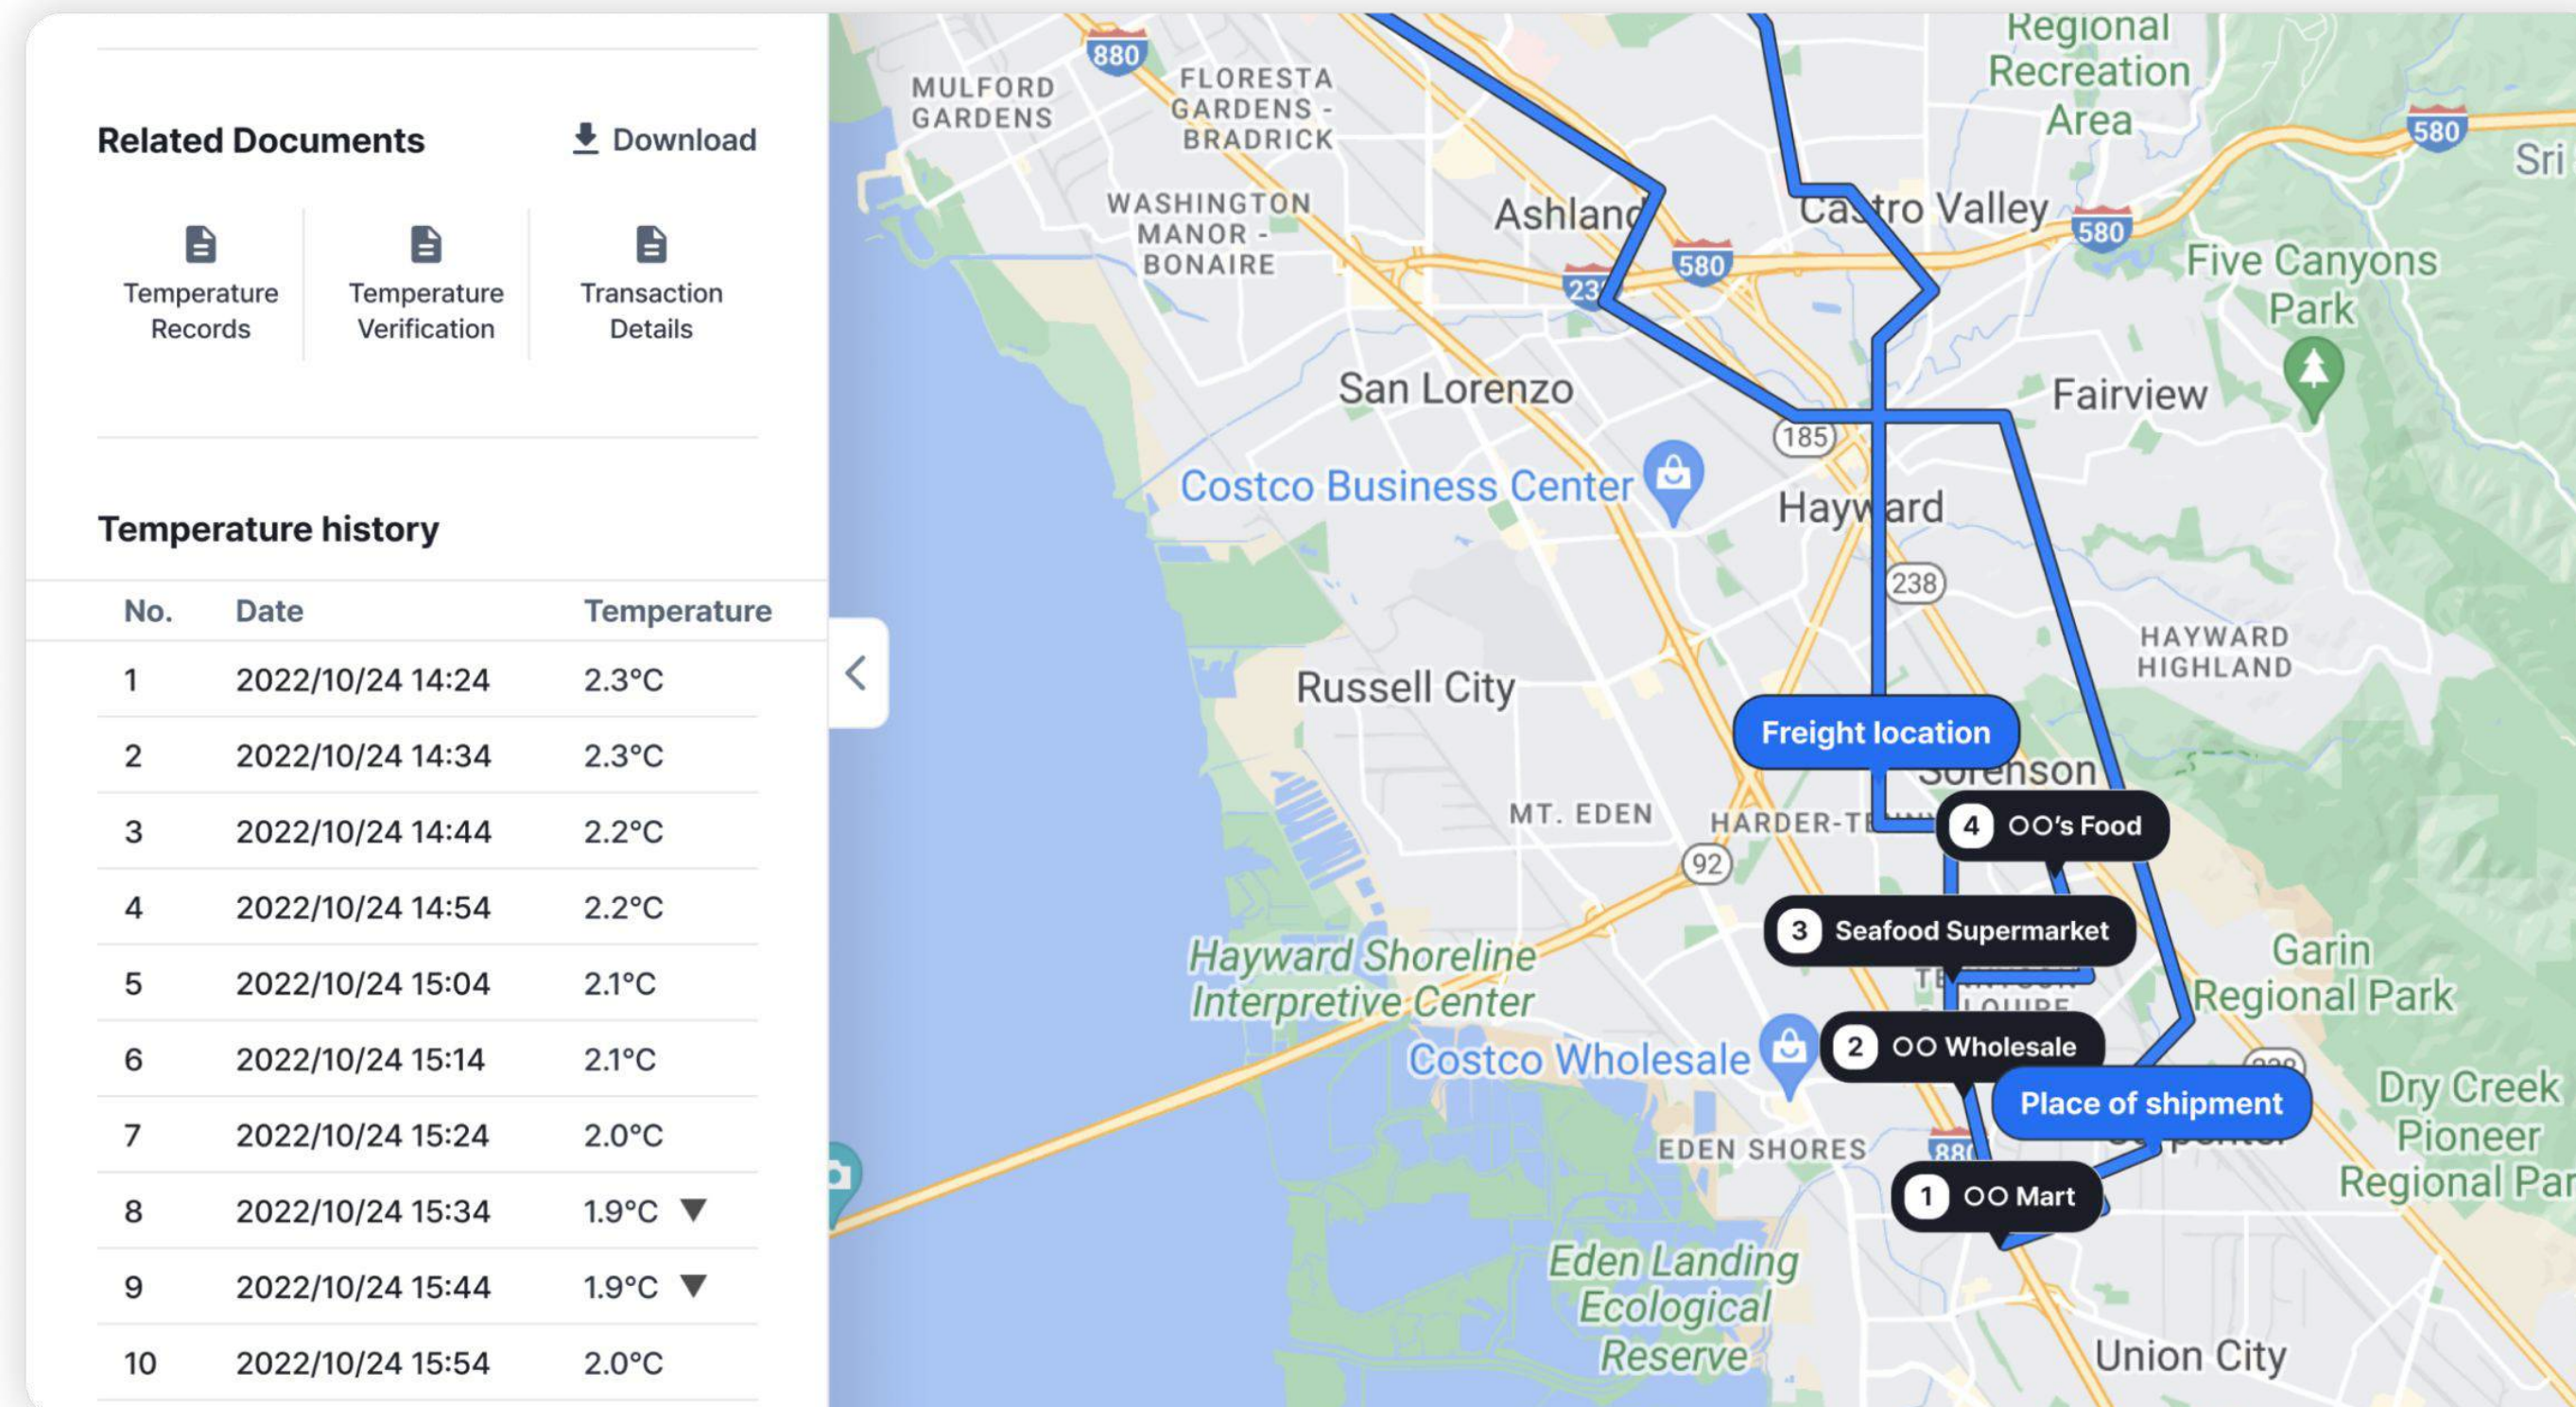

**OK**

# Transportation and dispatch management

- Upload and manage dispatch data for vehicles and drivers by region/course.
- Collect real-time location and temperature/humidity data during operation for effective management.

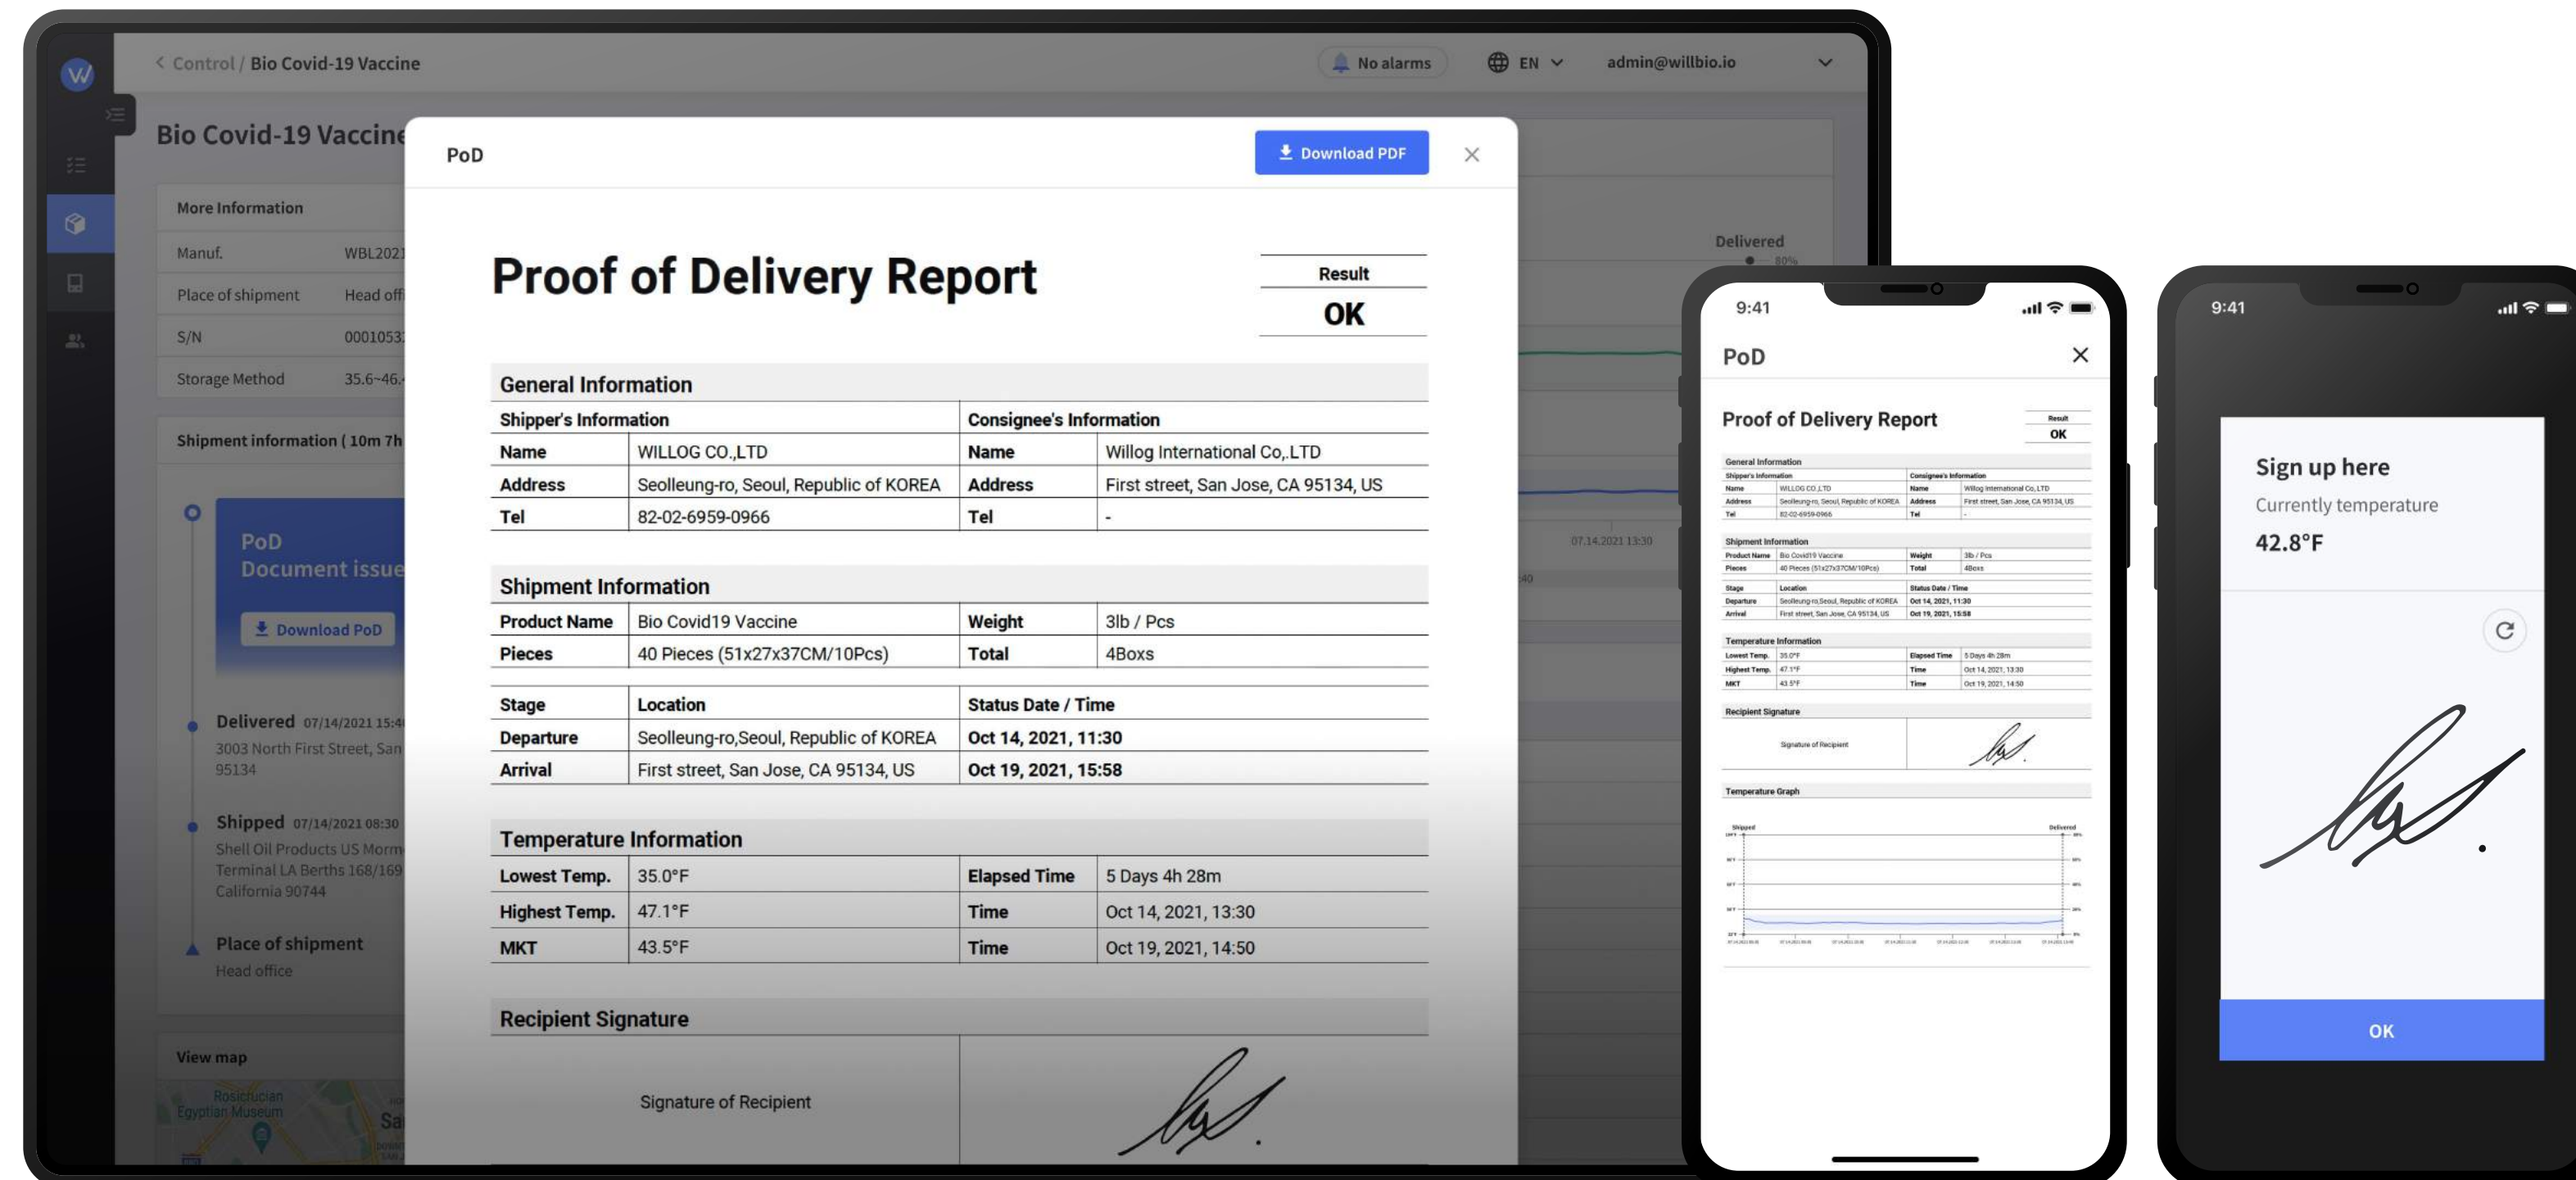

\* When using vehicle gateway or real-time sensor device

# Efficient workflow and document management

- Return and retrieval are streamlined with no cumbersome verification.
- Automatic generation and digital storage of electronic documents based on product temperature and shipping data eliminate the need for separate receipts or certificates, avoiding loss or damage.

Condition Monitoring for In-transit Quality Management
